

Stack 1

Group 5

Set 3

Fast Stacks of Cash

• \$1,875	May 1st
• \$2,000	May 3rd
• \$4,100	May 3rd
• \$4,675	May 3rd
• \$7,875	May 13th

MIKE: ***That's \$20,525! And that's in just the first two weeks of the month!***

TOM: Exactly. **You do that every two weeks, and you'd be sitting on over \$513,000 in a year's time.**

MIKE: That's some serious money.

TOM: Especially when you consider **it only takes about five minutes a day.** Look, Mike. **We are in the midst of a phenomenon that offers you a shot at \$15,000, \$20,000, even \$30,000 a month... IF you know what you're doing.**

MIKE: Well, that's why we're here today. Because, Tom, **you're going to show our viewers exactly how they could grab these profits for themselves.**

By the way, Tom, you've been in the business for over 25 years.

And this isn't your first game-changing breakthrough. I mean, you've built and sold companies to Wall Street for untold millions...

In fact, back in 2009, you developed a trading system called *Platinum 1*. And you sold it to a Wall Street firm for \$20 million.

TOM: That's right, Mike. **And since acquiring my platform, that Wall Street firm went on to increase revenues by a staggering \$4.5 billion a year.**

MIKE: And of course, there's *Alpha-9*. **In the first 90 days of this year, you've already closed out 51 winners. Anyone following along could have pocketed \$210,000 in just three months.**

And now, you believe this latest breakthrough is your best and brightest to date.

TOM: Mike, my new system takes things to a higher level.

MIKE: You're going to show us how it works in just a moment.

But Tom, how did this come about?

TOM: Mike, as I said, the markets have been overtaken by a trading phenomenon...

MIKE: That's the volume of money you mentioned... the amount changing hands has exploded 40-fold. A 4,000% surge.

TOM: Indeed. And Mike, *this mega-trend has been building for over 20 years, **and it's just hit a tipping point in the last six months.***

MIKE: And you spotted it.

TOM: Well, I wish I could take credit. But I can't... **I have a team of data scientists constantly evaluating the markets.**

MIKE: These are the gentlemen who helped you develop *Platinum 1*?

TOM: Yep, the same guys from NASA who helped me develop *Alpha-9*. They identified a unique pattern – an anomaly, really – HIDDEN in the trading frenzy.

Mike, this pattern is so unique – and so powerful – that when my team first showed it to me, I was like, "No way, it can't be that easy."

MIKE: How powerful are we talking, Tom?

TOM: Mike, my guys showed me that when you spot this anomaly... **and you tap into it in just the right way... it's possible to shear big chunks of cash right off the top of the market.**

MIKE: **\$15,000, \$20,000, even \$30,000 a month. That's incredible.**

TOM: Well, what's really incredible is the work my team put into it. We've studied billions of historical data points. We analyzed every possible trade. **And, Mike, we found we can pinpoint winners with 94% accuracy...**

MIKE: 94%... my God, Tom. **That's better than nine wins out of 10 tries.**

It's unheard of.

TOM: It is. And like I said, when the team first showed me the data, I didn't believe it. So I made my guys

go back and retest the entire data feed seven times, right in front of me. Mike, it turns out my guys were right.

MIKE: So you're talking about a new way that can shear thousands of dollars a month right off the trading frenzy.

TOM: Yes. **And it can be done with 94% accuracy.** Let me show you. Let's pick some random days... **take March 7, 2019, for example.**

There you see a volume surge in Dollar Tree...

Mike, that's nearly \$1 billion flying around... and if you'd known how to do it, **you could have pulled \$5,725 right off the top.** Here's another...

On March 15, 2019, you see the surge in Dollar General...

MIKE: Looks like about \$1 billion flying around.

TOM: \$1.2 billion to be exact. **And you could have pulled \$7,500 right off the top, without anyone ever noticing.**

And here's yet another... on **April 1, 2019**, you see the surge in **Constellation Brands**. That's \$980 million trading back and forth...

And you could have just stuck your hand into the frenzy, and **pulled out \$9,675, easy as pie**. And Mike, this phenomenon just goes on and on.

Heck, just this past month alone, you could have dipped your hand in on five separate occasions and walked away with over \$20,525...

MIKE: Tom, I mean, that's **\$20,525 in just a couple weeks...**

TOM: Yeah. This past month was fantastic. But Mike, get this: **The month before was even better!**

You could have grabbed...

Fast Stacks of Cash	
• \$2,300	April 1st
• \$5,575	April 4th
• \$5,400	April 4th
• \$6,700	April 17th
• \$9,675	April 26th
• \$2,375	April 26th

MIKE: **Tom, that's \$52,550.**

I've never seen numbers like that...

TOM: They're gonna get bigger, Mike. My team has identified several driving factors that indicate volume could continue to surge for the next 20 years. **In short, the opportunity is going to be magnified.**

MIKE: What's the potential here, Tom?

TOM: **Mike, the opportunity here is so tremendous – and runs so deep – that we had to create a two-tier trading platform to exploit the upside.**

First, **I want to give folks a daily feast of trading activity and a shot to pull \$15,000, \$20,000, even \$30,000 out of the market, each and every month.**

MIKE: That's a lot of action. I mean, at even **\$20,000 a month, that'd add nearly a quarter million a year to a person's bottom line.**

TOM: It sure could. But Mike, that's just the first tier.

My second objective is to give folks a chance to turn a modest \$5,000 into \$2.2 million in a year's time... and I want them to do it WITHOUT risking a dime of their own initial capital.

MIKE: And just to be clear, *that \$2.2 million would be in addition to the \$15,000, \$20,000, even \$30,000 they'd be pulling in a month, correct?*

TOM: You got it.

MIKE: **How 'bout you show us how your new system works.**

TOM: Love to, Mike. And let me start by saying my system is brand new, one of a kind, and completely proprietary.

MIKE: In other words, you're the only one who can do this. Now, you and your team evaluated billions of data points to make this happen.

And it showed how you can find winning plays with **94% accuracy**.

Tom, how is this possible? I mean, how in the world did you and your team develop this?

TOM: Great question, Mike. Let me show you the backstory, because this is fascinating. Take a look...

This shows trading volume statistics over the last 20 years... you see that?

Back in 1995, volume was \$9.9 trillion a year...

MIKE: A fraction of what it is today.

TOM: Yep. And now, look at this... this is the number of publicly traded stocks. And you can see, back in 1995, the number peaked at over 8,000 stocks for the United States.

MIKE: And it looks like the number has declined.

TOM: Mike, it's not just declined. It's declined by 50%. It's cut in half!

Now let's put these two graphs together, because this will blow you away... you see that?

As the number of stocks has declined by 50%.. the global volume has exploded to \$68 trillion. So what you have is a massive surge of money being pumped into fewer and fewer stocks.

And just about six months ago, we hit a tipping point... you see that?

Right there in December 2018...

MIKE: You're pointing at the X.

TOM: Right. **X marks the spot.** And what that means is you've got a staggering amount of money surging in and out of stocks...

MIKE: And yet, you've only got about half the stocks.

TOM: Mike, think of a garden hose being hooked up to a fire hydrant... the pressure is intense. And it's this pressure – this stunning trading frenzy – that's driving the opportunity today. And here's the thing: Hidden in this frenzy is a unique pattern.

When you know how to spot it, you can just dip your hand into that \$68 trillion money surge...

MIKE: And shear off big chunks of cash.

TOM: Exactly.

Look, Mike, you saw the **\$17,825 we could have pulled on Coty...**

MIKE: And the **\$11,125** on Lam Research...

TOM: And the **\$15,425** on Extra Space Storage ...

MIKE: And Tom, just this past month you saw five plays for over **\$20,000**.

TOM: And the month before we saw over **\$32,000**.

MIKE: **That's over \$52,000 fast.** Tom, what exactly is driving this volume phenomenon?

TOM: I'm glad you asked, Mike. It truly is a phenomenon.

The U.S. markets are the most liquid in the world.

And over the last 20 years, we've seen a surge of global participation. Think of it. We've got trillions of dollars, all over the world, seeking big returns. Banks. Institutions. Sovereign wealth funds.

And there's no better place to go after big returns than in the U.S. financial markets.

Look, I know traders in Japan and China, guys who stay up all night just so they can be awake while the U.S. markets are open.

At the same time, you've got money managers who have tens of millions of dollars a month flowing into their funds.

These guys are under pressure to generate enormous returns.

They can't make any money from bonds paying 1% or 2%. They have to put it to work with stocks. That's why we've seen a volume explosion.

Add it all up and you're looking at a 40-fold increase.

MIKE: A 4,000% volume surge. And all you do is tap into this frenzy.

TOM: Yes. But, let me be clear...

You gotta know what you're doing because not all volume surges are the same.

MIKE: We saw that. I mean, you pick the right volume surge, and it could hand you 10 grand in the blink of an eye...

TOM: But if you pick the wrong volume surge, you could come up empty-handed, or even lose money.

MIKE: Why is that, Tom?

TOM: Well, I'm sure you've heard about the influx of high-frequency traders.

These computerized programs buy and sell almost instantaneously.

And they do it over and over again all day long. That can generate massive volume.

But in many cases, the volume DOES NOT drive a tradeable move in the stock.

MIKE: So you see massive volume, but the stock doesn't go up very much. It just sits there, flat.

TOM: That's right. It's like treading water. Lots of activity, but the stock stays in one place. And even worse, with that kind of rapid-fire volume, the stock could reverse itself in seconds and go south.

MIKE: That means you could get lured into a trade by volume... and end up losing money.

TOM: Exactly. Take a look...

Here's a volume spike in Bank of New York on September 21. About \$1 billion changing hands... and two days later, the stock tumbles downward a point or so.

MIKE: No money to be made there...

TOM: Nope. Here's another. A volume spike in Carnival Corporation on March 26... \$750 million flying around.

And yet, the stock goes nowhere.

MIKE: It even falls a bit.

TOM: That's right. And here's another. Take a look at the volume spike in Cintas Corporation on September 26. \$450 million in play...

MIKE: But a week later, the stock dribbles down a couple points.

Not very lucrative.

TOM: Not at all.

But on the other hand, when you know how to spot the right volume signal, the payoffs can come fast and furious.

Take a look.

I already showed you how we saw **\$17,825 on Coty**.

And here's another opportunity Coty offered.

See the money surge. \$325 million changing hands. And boom.

You could have pulled \$8,875 right off the top.

MIKE: I love it.

TOM: Here's another. In this case, **Applied Materials surges.**

Mike, that's \$2.2 billion changing hands in a single day. **You could have just dipped your hand in**

and grabbed \$5,075.

MIKE: The money just keeps coming.

TOM: That's right, Mike. Here's another. This time in Disney...

MIKE: Looks like about \$2.75 billion changing hands in about six hours.

TOM: Right. **And you just need to dip your hand in, and boom – that's \$11,450, courtesy of Mickey Mouse and friends.**

MIKE: Tom, you make it look so easy. And yet, these highly lucrative surges appear identical to the surges that didn't go anywhere.

TOM: Most people can't tell the difference... and Mike, this opens the door to tremendous opportunities for folks who do know the secret.

MIKE: This is really exciting. Tom, can you show us the secret behind your new system?

TOM: I'd love to.

And let me be clear, Mike. my team climbed the ranks at NASA, Raytheon, and Texas Instruments... they've spent years developing air flight control systems, missile guidance technology, as well as radar tracking devices.

MIKE: So they know how to find a target and trace the path a stock is going to take.

TOM: That's right. Oh, and by the way, they hold 11 patents issued by the U.S. government.

MIKE: So these are world-class experts. And now they've applied their expertise to dominating the financial markets...

TOM: That's right. Up market. Down market. It doesn't matter.

Now, like everything I do, my new system is built on state-of-the-art technology and incredibly powerful algorithms.

Remember, we're tracking those millions upon millions of trades from all over the world that you see behind us.

You gotta have that kind of power Mike – because remember: **We've got \$270 billion changing hands every day. \$68 trillion a year.**

There's no way a human – or even a team of humans – could keep up for even a minute.

But my new system can.

MIKE: What do you call it, Tom?

TOM: We call it the **Triple-V Trade Protocol**... or V3 for short.

MIKE: The **Triple-V Trade Protocol**... I'm betting one of those three "V's" stands for "**Volume**..."

TOM: That's right. But listen, **Volume alone is not enough.**

MIKE: So, what do the other two "V's" stand for?

TOM: We'll get to that in a moment, Mike. And it's pretty fascinating.

But let me show you just how powerful the **Triple-V Trade Protocol** is... **our data shows that we're seeing a 94% accuracy rate.**

MIKE: It just doesn't miss!

TOM: At least not very often. And here's something else that will floor you. The Triple-V Trade Protocol has a tested reward-to-risk ratio of 15 to 1...

MIKE: Look Tom, there are always risks in the market.

And I realize no one has a crystal ball to predict the future, not even you. Losses happen. So you should never risk more than you can afford to lose.

TOM: Absolutely, Mike. But with **Triple-V**, the **reward is 15 times greater than the risk.**

In other words, for every dollar you put into these trades, you stand to make \$15. Or, for every \$1,000 you put in, you stand to make \$15,000.

MIKE: That's a bet I'd take all day long. Especially with a **94% accuracy rate.**

TOM: Yeah. So even if you factor in an occasional losing trade, our strategy is designed so they don't make a dent.

Imagine if we make 100 trades using \$1,000 per trade.

If we can get 94% accuracy, you're talking about 94 wins and just six losses...

Mike, if we get a 15-to-1 reward-to-risk ratio, those 94 wins would add up to \$1.4 million.
And the six losses would total a mere \$6,000.

MIKE: The opportunity to turn \$5,000 into \$2.2 million just got very real...

TOM: You ain't seen nothing yet, Mike. And by the way, the **Triple-V is completely proprietary.** OK. Completely proprietary.

MIKE: So, no one else can do this.

TOM: And no one is going to be able to replicate *Triple-V*. Remember, my team has 11 patents between them, and what we've created is one of a kind.

MIKE: Tom, the trades you find follow a set of very specific steps.

Please show us how the **Triple-V Trade Protocol** works...

TOM: Let's do it.

And let me start by saying using the Triple-V is as easy as one, two, three... a third grader could do it, because the algorithm does the heavy lifting.

MIKE: Let's see it in action.

TOM: OK. So let's start at the beginning. Even before we get to Triple V. And this first step is critical... Mike, as I mentioned, there are about 4,000 stocks traded daily on the U.S. markets. We only care about 100 of them.

MIKE: So you're only focusing on a fraction of the market. That's a tight niche.

TOM: And it's a wildly lucrative niche. Now, these companies are from all sectors. Some are manufacturing companies. Some are tech companies. Some are pharmaceutical companies. Some are energy companies. We don't care what these companies do.

We only care about one thing...

Each of these 100 companies share one special attribute that puts them in this elite trading group. In fact, this attribute GUARANTEES we will see an opportunity – every single week – to double, triple, even quadruple our money.

MIKE: Other companies don't have this attribute?

TOM: Nope. Only these 100... Mike, my team and I have been analyzing these 100 companies.

We've evaluated every single volume surge they've ever generated. And we've determined the reward-to-risk ratio on every single one of them.

After our due diligence, we found these 100 companies are ideal for the Triple-V Trading Protocol.

MIKE: So, the other companies don't pay off.

TOM: Oh, the other companies do pay off.

It's just that we only want to play the cream of the crop. And these top 100 companies have shown us a 94% win rate.

MIKE: That's about as close to perfect as you get... can you share the list with us?

TOM: Mike, I wish I could. But that's a secret we simply cannot reveal. This list of 100 stocks is pure gold, and I simply can't share it with the public. But look, you've already seen how much money this list could put in our hands.

Remember **Lam Research and the \$11,125**. It's on the list... and remember **Coty and the \$17,825**. It's on the list. Then there's the **\$15,425 from Extra Space Storage**. That's on the list too...

MIKE: Gotcha. And we also saw those wins from this past month...

TOM: Right. And the wins from the month before as well. These companies are all on the list.

MIKE: Tom, how many opportunities do each of these stocks generate per year? Are they one and done?

TOM: Great question, Mike. And no, they are not one and done.

Not by a long shot. In fact, each of these stocks generates an average of four trades a year.

MIKE: So with 100 stocks, **you're talking about 400 trading opportunities every 12 months**.

TOM: That's right. About seven or eight trading opportunities per week. Of course, we don't recommend taking every trade. We only want the cream of the crop. **That's why we're hitting a 94% accuracy rate...**

MIKE: Tom, can you show us the next phase of your **Triple-V Trade Protocol**?

TOM: Definitely. And this is where the first V comes in... **Volume**. Now, here's the deal. **When you see big volume, you know that strong emotions are flooding the market.**

Thing is, for most people, big volume surges are terrifying.

But for me, big volume surges mean opportunity is at hand.

But listen, even a 50%, 75%, even a 100% volume spike doesn't faze me.

For us to bother looking at an opportunity, the stock has gotta be "juiced."

And we don't consider a stock juiced unless we see a 300% volume spike.

This is what it looks like...

MIKE: That's a big spike, Tom.

TOM: Yep. It's a big spike. Most people are freaking out. But we embrace it.

MIKE: Tom, why do you need to see such a big spike?

TOM: **Mike, my team and I found that spikes of 300% and higher offer the biggest, fastest gains with the least amount of risk.**

MIKE: You have a stunning **15-to-1 reward-to-risk ratio**, so it's working.

TOM: And a **94% accuracy rate**. Let me show you how it works... the stock here is **3M**.

You see the surge right there. A 300% spike. That's \$1.6 billion flying around.

MIKE: And you just reach in and shear some off.

TOM: Yep. In this case, **you could have pulled \$11,475 right off the top...** and here's another.

This time in **Expeditors International**.

MIKE: How much money is flying around there, Tom?

TOM: About \$315 million... **shear some off the top and you've got a fast \$10,000 in your hands.**

MIKE: Let's try one more.

TOM: OK. Here's Abiomed...

MIKE: About \$500 million moving back and forth.

TOM: And you just reach out and grab it. This time, **you could have walked away with \$9,300 in your hand.**

MIKE: I see how you could give people a shot at **\$15,000, \$20,000, \$30,000 a month...**

But Tom, you mentioned that you don't move forward on volume alone.

TOM: No we don't, Mike. That would be a waste of time. And very risky. **Let me show you the second "V" of the Triple-V Trade Protocol.**

And Mike, without this, you got nothing...

MIKE: Let's check it out, Tom.

TOM: Remember, trading volume has *surged* off the charts.

MIKE: But the stock doesn't always move on Volume.

TOM: That's right. It's like treading water. Lots of activity, but no real movement.

MIKE: So you could get stuck in a play that goes nowhere.

TOM: Correct. Or worse, you get lured into a stock that moves against you. You end up losing money. So, before we target a trade, we need to do two things.

First: We need to confirm the stock's DIRECTION. We need to know for sure which way it's going. Second: We need to make sure the move has a significant and sustainable FORCE behind it.

MIKE: Otherwise the stock could stall before it goes anywhere.

TOM: Exactly. So **our second "V" is called Vector.**

MIKE: OK. I struggled through a calculus class once upon a time, and vector was part of the mix. **As I recall, vector means DIRECTION, right?**

TOM: You're half right, Mike. Yes, vector is used in calculus. In fact, it's used in aerodynamics, something my team has decades of experience with.

Anyway, vector is a measure of a moving object's DIRECTION, as well as the FORCE behind the object's move. **Not only does VECTOR show where the stock is going, but it also shows the force behind it.**

You might think of it as momentum.

MIKE: OK. So, **Vector measures direction along with force. Got it.**

TOM: Now, to measure this, we require the stock to move ABOVE its high on the day of the volume spike. Take a look...

As you can see, this stock had a volume spike of 325% on Monday.

And on that day, it hit a high of \$44.

Now, for us to move forward with our play, the stock must go above \$44 on a subsequent day...

And you see, there it goes – on Tuesday it hits \$45. **That gives us a positive Vector reading.**

MIKE: And it confirms the flow of cash – massive cash – into these stocks.

TOM: Exactly. Plus, it lets us know if a stock has enough force behind it for a tradeable run. Let me give you an example.

This time in **Atmos Energy.**

There you see a **315% surge on November 29.**

MIKE: That's about \$423 million flying around...

TOM: But we don't want to strike right away. We need our Vector confirmation. So, **on the day of the Volume surge, Atmos Energy hit a high of \$93.50.**

MIKE: So you need it to hit \$93.50 or higher on a subsequent day?

TOM: Exactly. And there it is the very next day, on November 30.

You see that?

MIKE: The stock is hitting \$94.

TOM: That gives us our **Vector confirmation...** you put it all together, and **you could have sheared a fast \$6,750 right off the market in as little as a few days...**

MIKE: Fascinating. And there's a third "V" you still need to confirm.

TOM: That's right. Mike, I hate sitting and waiting. I like trades that move quickly. That way, you can get in fast and you can get out fast.

And we've set this system up so that's exactly what we do.

The third "V" stands for Velocity.

MIKE: It's really a measure of speed.

TOM: **That's right, we want to see that things are happening fast. That's why the price jump must happen within five days.**

MIKE: Can we see an example?

TOM: Sure. Take a look... this stock has a 400% volume spike on Friday. That means that within five trading days it must go above Friday's high. In this case the high is \$24. But for the next five days, it stays below \$24. The trade is dead in the water, Mike.

We are not interested.

But... if we get our **Velocity confirmation**, the trade is on. Here's an example...

This is Fifth Third Bancorp.

And you can **see the 300% surge on May 22...**

And here you see our **Vector confirmation**...

And it happened within five days, giving us our **Velocity confirmation**, so we are good to go.

In this case, **you could have dipped your hand in and sheared a fat \$5,000...** right off the top.

MIKE: Amazing.

So Tom, to recap, when the **three V's in your Triple-V Trade Protocol snap into place, it tells you a stock is ready to take off.**

So all you need to do is get in early and ride the stock for what can be big gains.

TOM: Well Mike, actually, we don't try to get in early. We don't need to get a ground-floor spot. Because look: We did an in-depth analysis of volume spikes.

I'm talking about extensive studies done by my team of scientists.

These men are flat-out *experts* at determining flight paths. Flight paths for rockets. Flight paths for jets.

MIKE: And flight paths for stocks.

TOM: You hit the nail on the head, Mike. One of our guys worked at NASA, OK. So, he spent decades figuring out exactly where a rocket would go, based on determining factors.

And that's exactly what the Triple-V Trade Protocol does with our 100 stocks. What my team determined is when you plug in price, volume, range, high, low, etc., and include the stock's historical path... You can determine with a very high degree of accuracy exactly where the stock is going to go next.

MIKE: So you've got a predetermined flight path BEFORE the stock even starts to move.

TOM: Yep. And we've determined that all of our successful trades looked exactly the same. Take a look at this chart...

You see? So, we can project where the stock is going. And project how long it's going to run.

MIKE: And Tom, I want to emphasize – your team analyzed thousands of trades. And you found when this pattern appeared, 94% of the trades were winners.

TOM: Yes. And as a result, we don't care about getting in early.

And we don't care about staying to grab every last bit of profit.

We only care about grabbing this sweet spot. You see that...

The stock's overall run could be 10%... could be 15%. Hey, it could be 25% or even 30%... **but we only care about the middle 3%**

See it right there...

It's the place where risk is low and reward is high.

And look: The Triple-V algorithm crunches all the numbers.

It's designed to tell us exactly where to buy...

And then the algorithm crunches all the data in real time and predetermines the sell point.

MIKE: I see. So you go for the easy pickings. The middle of the surge.

TOM: Yep. And we can do it over and over again. **With a 94% win rate...**

MIKE: This is fantastic. I can see how your accuracy rate is so high, because you're taking the part of the surge that's almost a given.

But Tom, if the stock only moves 3%, how do you make any money?

TOM: Great question. Look: 3% is not worth our time. Nobody is getting rich on a 3% gain, OK?

So we use a special trade to magnify the gains in the shortest time possible.

Again, we've done extensive testing, and we've determined **that a 3% move on the stock is all we need to double, triple, or even quadruple our money.**
