Top 10 Cryptocurrencies for 2018

What are the best cryptocurrencies to invest in for 2018? Here is a guide to the top ten cryptocurrencies as we head into the New Year.

The cryptocurrencies listed below are ranked according to market capitalization, which refers to the total value (measured in US dollars) of all of the coins that are in existence for each cryptocurrency.

1. Bitcoin

Bitcoin (<https://moneymorning.com/tag/bitcoin-price/>), whose market cap is hovering around \$250 billion as of late 2017, is undoubtedly the best-known cryptocurrency. It is also the oldest.

If you prefer investing in the tried-and-true, bitcoin is probably your best bet within the cryptocurrency world. It remains highly volatile, but its growth has been more steady over the past year than that of many other cryptocurrencies, and the large mindshare that bitcoin has acquired means it is likely to stick around for a long time.

2. Ether

Ether may be the second best-known cryptocurrency. Unlike bitcoin, which was designed primarily as a digital transaction system, Ether is the token that powers Ethereum, a decentralized computing and storage network.

Ether and Ethereum have a much broader set of potential use cases than bitcoin, which may make them more valuable in the long run.

3. Ripple

You may be surprised to learn that Ripple is currently the third most popular cryptocurrency. Ripple (which is abbreviated as XRP on exchanges) is not as well known as bitcoin and Ether.

However, the value of Ripple has been rising quickly in late 2017. If that trend continues, Ripple may turn out to be one of the best cryptocurrency investments in 2018.

4. Bitcoin Cash

Bitcoin Cash, which was born out of a fork from bitcoin, is designed to be more scalable than traditional bitcoin. If bitcoin's user base becomes so large that bitcoin cannot effectively support it, bitcoin cash may become a more popular alternative, driving the value of bitcoin cash above that of bitcoin.

Such a shift is not likely to happen in the near future, however; for now, people investing in bitcoin cash are making a long-tail bet about its

Page 1 of 1

Top 10 Cryptocurrencies for 2018

What are the best cryptocurrencies to invest in for 2018? Here's a guide to the top ten cryptocurrencies as ranked by the Motley Fool.

The cryptocurrencies listed below are ranked according to market capitalization, which refers to the total value (calculated in U.S. dollars) of all the coins that are in existence for each cryptocurrency.

1. Bitcoin

[Bitcoin](#) (the leading cryptocurrency) whose market cap is hovering around \$250 billion as of late 2017, is undoubtedly the best-known cryptocurrency. It's also the oldest.

If you prefer investing in the tried-and-true, Bitcoin is probably your best bet within the cryptocurrency world. It remains highly volatile and its growth has been more steady over the past year than that of many other cryptocurrencies, and the large number of Bitcoin holders (and investors) makes it likely to stick around for a long time.

2. Ether

Ether may be the second best-known cryptocurrency, unlike Bitcoin, it's not designed primarily as a digital payment system. Ether is the token that powers Ethereum, a decentralized computing and storage network.

Ether and Bitcoin have a similar broader set of potential use cases than Bitcoin, which may make them more valuable in the long run.

3. Ripple

You may be surprised to learn that Ripple is currently the third most popular cryptocurrency. Ripple (which is abbreviated as XRP) is designed to be used as a payment system, much like Bitcoin and Ether.

However, the value of Ripple has been rising quickly in late 2017. It's not clear whether Ripple may turn out to be one of the best cryptocurrency investments in 2018.

4. Bitcoin Cash

Bitcoin Cash, which was born out of a fork from Bitcoin, is designed to be more scalable than traditional Bitcoin. It's a bit of a user base, but it's not as large as Bitcoin's. Bitcoin Cash may become a more popular alternative, though the value of Bitcoin is cash above that of Bitcoin.

Such a shift is not likely to happen in the near future, however, for now, Bitcoin remains the best choice for investors.

future value many months or years from now.

5. Litecoin

Litecoin is another alternative to bitcoin that was designed to be faster and more scalable. Litecoin was once one of the most popular altcoins (or alternatives to bitcoin), but at the moment — despite some gains in late 2017 — its future seems perhaps less bright than it did in early 2017.

6. Cardano

Cardano is another lesser-known cryptocurrency. It was designed to solve certain performance and security issues within bitcoin. If you believe that cryptocurrency users will eventually shy away from bitcoin because of performance or privacy problems, Cardano is a good investment.

7. IOTA

Designed to power “smart” applications in the Internet of Things (IoT), IOTA essentially makes it possible to monetize services between devices.

IOTA is not on many investors’ radars today. However, the IoT is likely to keep growing and becoming more complex for the foreseeable future. In turn, IOTA may grow more valuable.

8. Dash

Dash is yet another cryptocurrency that aims to solve performance and privacy challenges associated with traditional bitcoin. Dash enables instant transactions, which is a major advantage over the bitcoin network, where transactions can currently take many minutes to complete. Dash also offers features that are designed to make transactions difficult for third parties to trace.

9. NEM

Created in 2015, NEM is a relatively young cryptocurrency. The NEM platform includes not just support for digital currency transactions, but also built-in private messaging and a reputation system. It is more or less a more sophisticated version of bitcoin.

NEM’s presence is currently strongest in Japan, where some banks and private companies are experimenting with it.

10. Monero

Monero is a privacy-focused cryptocurrency. Through features like RingCT, it not only makes it difficult to trace the identities of people who perform transactions on the blockchain but also protects the amount of value that is traded.

If you think privacy will become crucial to the future of cryptocurrency, Monero is a good investment.

These are just a few of the many cryptocurrencies that are available for investment. To learn more about innovative technologies ripe for investment, [at our Cryptocurrency Millionaire Summit \(https://mediashower.com/ce2/64457/2050/5697\)](https://mediashower.com/ce2/64457/2050/5697).

Quick Guide to Ethereum Investment

Investing in an unfamiliar altcoin can be challenging. While similar in many ways to bitcoin, Ethereum presents challenges of which a knowledgeable investor should be aware.

To be a better Ethereum investor, take a look at these common questions about Ethereum investment, along with their answers.

Why Invest in Ethereum?

Ethereum is showing a very strong return-on-investment. With Ethereum showing an 8,861 percent increase in its coin price in a 12-months period, Ethereum presents a potentially viable option for the altcoin investor who may feel that he has been priced out of bitcoin.

Bitcoin's lack of programmability makes it difficult to set up bitcoin-enabled applications, as well. In order to build a bitcoin application, one must be familiar enough with the programming language with which the bitcoin blockchain is established in order to create a transaction verifier while simultaneously being able to create a standalone program that would use this information. This would require creating an infrastructure where the standalone program can be monitored and maintained and where links to the blockchain can be checked regularly. Such an application is neither decentralized nor simple to implement.

With Ethereum, it is easy to set up an application using the blockchain's scripting language that utilizes the altcoin's "smart contract" capabilities. Ethereum-based applications can be run on Ethereum's infrastructure, reducing the expertise and overhead needed to set up a new application. Since Ethereum has more uses available to it than simply being a digital currency, Ethereum may stay relevant longer than bitcoin ultimately.

What is an Ethereum Wallet?

An Ethereum wallet is the ledger – either in digital or physical form – where one's Ether keys are stored. Without these keys, it would be impossible to conduct a transaction with your Ether. Like bitcoin wallets, Ethereum wallets can be publicly or personally stored, can exist on paper or in digital form, and can be stored on a computer or on a personal device.

Ethereum wallets are different from bitcoin wallets in the sense that they have options to manage how much you wish to spend on "gas." "Gas (<https://www.bitcoinmarketjournal.com/altcoin-investment/>)" in an Ethereum transaction is the cost to perform the transaction. Transactions in Ethereum are charged a nominal fee for completion, with this fee going to the miner that discovered the block on which the

transaction will be happening. This rewards those that work to maintain and grow the blockchain while discouraging misuse of the Ethereum

network.

How Can You Secure Your Ethereum Investment?

Safeguarding your Ethereum investment boils down to two factors: how well you vet your vendors and how seriously you take your own security obligations.

It is important that you take the time to thoroughly research anyone with whom you may be buying, trading, or using Ether. This includes your Ethereum exchange, wallet provider, Ethereum-based ICOs in which you may be investing, and DAPP (decentralized application) providers whose services you may be using. As Ethereum is not regulated as a publicly-traded commodity would be, you must be assured of the risk you are embracing before choosing to partner with an Ethereum vendor.

It is also necessary to take precautions in protecting your wallet. Using two-step verification for passwords and passcodes, not storing wallets on smartphones, keeping backups of your Ethereum keys and passcodes, and advising your loved ones on how to access your wallet in case of death (<https://www.bitcoinmarketjournal.com/bitcoin-estate-planning/>) or incapacitation will all go far to protect your investment. Like bitcoin, should your Ether be lost, there is no known way to recover it.

Can You Invest in Ethereum ETF?

There are fewer options available for those looking for an Ethereum ETF than for a bitcoin ETF. Grayscale Investments has recently announced it will offer shares of its Ethereum Classic Investment Fund for sale on the OTCQX exchange. The trust is a managed portfolio of Ethereum Classic, which is a hard fork of Ethereum that occurred in opposition to the decision to refund the defrauded Ether stolen during the DAO hack.

The SEC is currently considering proposals for Ethereum ETFs. It is thought that, as Ethereum grows in popularity, the pool of Ethereum ETFs will grow as well.

Ethereum is based on radical technology that may one day reshape the entire financial system. Want to know more about investing in radical technologies? Learn how at our Cryptocurrency Millionaire Summit (<https://mediashower.com/ce2/64409/2050/4059>).

Everyone is Getting Hilariously Rich and You're Not... Yet

Recently, the one of the co-founders of a cryptocurrency known as "Ripple" became richer than Mark Zuckerberg.

Yes, you read that correctly.

A co-founder of a digital currency virtually unknown to the vast majority of the public became wealthier than the founder of Facebook – the near ubiquitous social media platform used by over a billion people worldwide.

In short – the age of cryptocurrencies has been ushered in.

And now more than ever it is important to set yourself up for massive financial rewards down the line.

To be totally honest...

It should come as no surprise that smart investors are scrambling to get into the cryptocurrency craze before inevitable mainstream adopters spill out of the floodgates.

Just look at people like Josh Fillmore, who at 26 has a net worth "in the hundreds of millions" all off of a single \$400,000 investment into Ethereum.

And while you may not have \$400,000 like Mr. Fillmore to invest... even a modest \$100 investment can turn into a fortune in a relatively short amount of time.

It's the belief that blockchain technology and cryptocurrency are going to forever change how we conduct financial transactions – trustless, totally secure, and without government interference – that is driving this craze.

Even Jamie Dimon, CEO of JP Morgan Chase, who once called Bitcoin "a fraud" has had an about face on crypto, remarking recently that he "regrets" his now infamous criticism of cryptocurrency.

He even went so far as to say that blockchain technology, which sits at the very foundation of Ethereum, "is real".

So what are you waiting for? Just enter your email address below to learn how to get started on your path to financial success before the

masses get there before you.

We Just Found The New King Of The Computer Industry

Jan 31st, 2014 | By Michael A. Robinson

During the **Depression**-ridden 1930s, with the **United States** circling the financial abyss, an American industrialist named **Thomas J. Watson Jr.** gambled the future of his business-equipment company on an expansion plan that included wholesale hiring, investments in technology, and the construction of new factories.

For six years, Watson had his factories at full bore – churning out tabulating equipment there were no buyers for. But he believed in his plan and stayed with his strategy.

When the **Social Security Act of 1935** came up for bid – billed as “the biggest accounting operation of all time” – Watson's company was the only firm able to supply the equipment needed to maintain the employment records of 26 million people.

The successful execution on this contract led to other government pacts. Not only did this allow Watson's company to navigate the Depression; it set it up for long-term success.

That company went on to become one of the most-successful computer firms in history – the venture we now know as **International Business Machines Corp. (NYSE: IBM)**.

“**Big Blue**,” as the company is also known, has been experiencing some tough problems in recent months. But its successful years made fortunes for many investors.

We believe investors can reap the same windfall from the company that's poised to replace IBM as the new king of the computer industry.

We've identified that successor – and are going to bring it to you today.

From Leader to Laggard

Back on Jan. 21, **IBM** announced that fourth quarter sales had fallen 5%.

That sounds like the kind of small decline that really shouldn't worry investors. After all, profits rose about 6% from the year-ago quarter to about \$6.2 billion.

But this was the seventh straight quarter that revenue fell. And Big Blue said it was taking a \$1 billion first-quarter hit to cover restructuring costs.

Even as IBM tries to make itself over – which it has successfully done before – another firm is poised to take its place at the head of the sector table.

That company is **Lenovo Group Ltd.** (OTC: LNVGY). And it's poised to become the “**Next IBM**” – and Big Blue is helping make this happen.

Let's Make a Deal

On Jan. 23, Lenovo agreed to pay \$2.3 billion for Big Blue's low-end server business. This is the second major deal between the two companies in less than a decade; Lenovo bought IBM's struggling PC business back in 2005.

Founded in a Chinese guard shack back in 1984, **Beijing-based Lenovo** today stands as the world's largest PC company. It's also a leading global supplier of smartphones and tablet computers.

Buying IBM's server unit makes a lot of sense. Despite all its experience, IBM couldn't keep costs under control and still compete in a global market. Last year, the so-called “x86” server line lost \$26.4 million.

But Lenovo is known for its strict cost discipline. **Bernstein Research** notes that IBM had a cost ratio of more than 20% of sales. Lenovo, on the other hand, generally keeps those costs at around 10%.

The deal automatically transforms Lenovo into the world's No. 3 vendor of these servers, giving it a 14% share worldwide and \$4.7 billion in sales.

In Lenovo's home market of China, sales of these servers are expected to grow between 5% a year and 8% a year – more than twice the industry growth rate – as the world's most populous nation builds new computer data centers to keep up with its economic growth.

This acquisition hands Lenovo some excellent built-in synergies. With its global supply chain, it can roll out this business very quickly – incurring only nominal additional costs for their distribution.

More to the point, the company also quietly agreed to take roughly 7,500 IBM workers as part of the package. Many of these are longtime employees who know the server market inside and out.

That alone will save Lenovo millions in hiring costs. It also gives them access to many of the employees who helped build the business and know where to look for hidden efficiencies.

And Lenovo has deep experience in taking the units that no longer fit IBM and creating enormous shareholder value.

When Lenovo bought IBM's PC business in 2005, the Chinese upstart had a 6.4% market share. Today, that figure stands at nearly 17%. It's the only PC firm with any significant market share gains over the last decade.

On a personal note, my wife is one of the reasons why Lenovo is doing so well with its PCs. She's a technology expert and oversees the IT department at work.

Bitcoin Millionaire: "Get Out of Stocks Now"

If you've ever thought about investing in Bitcoin, Ethereum, or Litecoin, you must read the message on the next page before you take action.

It's from the Silicon Valley expert who first recommended Bitcoin way back in 2013 – on January 1.

Back then, one Bitcoin (BTC) traded for just \$16.93....

84 days later, on March 26, 2013 the price was \$77.23/coin – an eye-popping **356% gain in under three months**.

(<http://cryptocurrencyvirtualportal.com/cc2cw2.php?iris=777433&src=ob&ad=bmil2>)

And it didn't stop there – if you had put just \$1000 into Bitcoin when he first recommended it, you'd be sitting on a stake worth \$247,152 today.

Imagine what you could have done with that money – you could've quit the job you're stuck in, retired a decade or two early, and still had enough left over to pay for an exotic 2-week vacation.

This Bitcoin situation was exceptional, without a doubt...

And the gains to be had from Bitcoin, at this point, are minimal.

We don't expect you'll see 356% returns in 84 days from Bitcoin again.

In its place, investors have flocked to a wave of other "cryptocurrencies" that are popping up left and right.

Most of them are complete garbage.

They're either schemes made by tech-savvy rats looking to make a quick buck, or complete and utter jokes – like Paris Hilton's "Lydian".

However, according to the man who predicted Bitcoin's meteoric rise, one upcoming event could send a handful of what we call "ERC-20 tokens" to the moon...

And it's set to occur in a matter of weeks.

Get his full message on the **next page** (<http://cryptocurrencyvirtualportal.com/cc2cw2.php?iris=777433&src=ob&ad=bmil2>), including the quick-and-easy steps you can take to capitalize on this once-in-a-lifetime opportunity...as safely and effectively as possible.

If you pay close attention, you could soon find yourself jumping for joy on top of an enormous pile of cash.

Ignore it, and you will regret it for the rest of your life.

<<Read His Urgent Message>>

~~Spread this urgent message~~

If You Want to Cash In on Cryptos, You Must Take This Step

Jan 9th, 2018 | By Michael A. Robinson

Back in February 2016, I recommended that you all buy **Bitcoin** as a hedge – as “**The Gold of Tech.**”

Those of you who moved on that recommendation made peak profits on the cryptocurrency of more than 5,000% in mid-December. But it's been a bit of a wild ride since then, with every bit of “noise” sending Bitcoin down 10% or so, and then the next day's “signal” bringing it right back up.

Just check out what happened while we were all sleeping Sunday night.

Most of the major digital currencies fell pretty hard – Bitcoin, 15% – after **South Korea** announced that it is cracking down on crypto speculation and launching an investigation into six banks. **Seoul** wants to make sure these banks are following anti-money laundering regulations – and, most likely, not allowing **North Korea** to trade cryptos.

I've long predicted that the world's major economies will do all they can to get a handle on cryptos – and that each time they make a move like this, we'll see a slide.

But digital currencies are here to stay. And they'll keep coming back – and keep making smart investors money.

In other words, don't panic.

While this is a very lucrative field, it's volatile. Therefore, to profit in this exciting new arena against that turbulence, you need a savvy set of tools.

You want to be able to put in lowball limit orders to profit from selloffs. And you'll need stop-losses to protect your capital and profits.

There's only one way to do that...

You Need These Tools

As I've mentioned in a couple of our recent chats, we'll be talking a lot about cryptocurrencies in 2018.

That's because there's plenty of money to be made in this new tech-centric sector. And it's one that defines high-octane growth.

Consider that the first **Bitcoin** transaction occurred with zero fanfare nine years ago this Friday. Today, there are hundreds of rivals to this first crypto, and the industry is now worth some \$759.7 billion by market cap.

And if you want to rack up big short-term gains, you need access to those tools I mentioned before – and you need to do business with a bona fide cryptocurrency exchange.

So today, I'm going to show four that are top notch.

Now then, many of you have opened up accounts at the popular **Coinbase** online wallet. And for good reason...

No other firm has made it simpler to sign up, link a debit or credit card, and begin buying **Bitcoin**.

No other firm has made it simpler to sign up, link a debit or credit card, and begin buying **Bitcoin**. Coinbase's mobile app is so easy to use that it is now the most downloaded app on the **iPhone**. (And it got there quickly: In mid-November, it still hadn't even cracked the top 200 on that list.)

Coinbase is popular for two big reasons: 1) It's most basic function is buying and selling Bitcoin, Ethereum, and/or **Bitcoin Cash**; and 2) it's a robust "**digital wallet**" where you can park your cryptos after making trades on a major exchange.

Coinbase also is affiliated with the **GDAX** crypto exchange. However, I'm not currently recommending GDAX, because you can only trade four digital currencies on it, meaning it barely scratches the surface.

Now, before you start trading cryptos, there's a couple of things you should know. These aren't warnings – telling you to stay away. I just want you to know what you're getting into.

1. Crypto trading happens almost solely online. Unlike with stocks, you often can't call your crypto "broker." There's very little live customer support available.
2. Some of the exchanges have become so overwhelmed that they're not taking new customers at this moment. I know they're working on staffing up, but for some it could take a few weeks or even a month or two before they're ready to start accepting new clients.
3. Several are for trading cryptos only; they don't accept dollar deposits. That means you'll have to buy your coins at a place like Coinbase and then transfer them to one of these exchanges.

But it's worth the hassle. Just look at the 5,000% profits some **Strategic Tech Investor** members have made with **Bitcoin**.

Then there's the relatively new cryptocurrency I recommended to my **Radical Technology Profits** members back on

May 3. They've seen peak gains of 1,195% – a true 10-bagger – in well under a year.

With that kind of life-changing wealth at hand, let's take a look at my four **Top-Notch Crypto Exchanges**...

Top-Notch Crypto Exchange No. 1: Poloniex

You can trade more than 80 cryptocurrencies at this **San Francisco**-based exchange, including **Bitcoin**, **Litecoin**, **Dash**, **Ethereum**, **Zcash**, and **Monero**.

Of course, providing enough traders on each side of the trade can be a challenge when dealing with so many different currencies. **Poloniex** solves that problem with a unique "maker-taker" model that rewards coin makers with lower-than-usual fees to trade. That gives them more reason to steer their business to Poloniex than other exchanges.

This exchange is well-suited for traders that rely on a lot of technical tools. You can look at charts in multiple time frames, multiple-option candlesticks, and both **Fibonacci levels** and **Bollinger bands**.

Right now, Poloniex lets traders buy, sell, and place stop-limit orders, though more trading functions are bound to appear in coming months. Investors can also buy coins on margin.

The exchange hasn't garnered top marks for customer service, which means Poloniex may not be ideal for investors that are new to cryptocurrencies and have a lot of questions.

Top-Notch Crypto Exchange No. 2: Bittrex

Traders focused on the second tier of cryptocurrencies, known as "**alt-currencies**," rave about this **Seattle**-based site.

That's because you can trade more than 250 different alt-currencies on **Bittrex**, and it's often is among the first exchanges to build strong trading volumes when a new digital currency is launched.

Plus, the site's popularity means it sees robust trading volumes in a broad range of cryptos.

Bittrex is also one of the few exchanges to get very high marks for rapid and accurate customer support.

On the other hand, it charges 0.25% on each side of the trade, so this is not the most inexpensive exchange around. But based on a broad range of feedback, Bittrex appears to be among the most trusted and reliable of all of the cryptocurrency exchanges.

Top-Notch Crypto Exchange No. 3: Kraken

Also based in San Francisco, this exchange initially focused on **European** crypto traders, but now has a global base.

Kraken offers a range of deposit and withdrawal limits, based on tiers that a client selects. The higher the tier, the more rigorous the upfront account application will be.

Kraken offers among the lowest fees of any exchange. This may be the most robust platform for traders that are used to foreign-exchange trading sites, with a range of tools at hand, including limit orders, advanced orders with predefined triggers, leveraged positions, margin trading, and short selling.

The site scores very high marks for its security. Kraken was the first exchange to create a cryptographically verified proof of reserves that provides transparency and proof that all of a client's funds are held at the site and not in offline cold storage.

Kraken's servers are held in secure facilities with armed guards, retina scanners, and top-notch video surveillance. Bear in mind that Kraken's mobile app is not well developed, so if you choose it, you'll probably want to do your trading on

a PC.

Top-Notch Crypto Exchange No. 4: Bitfinex

This **Hong Kong**-based trading exchange goes to great lengths to verify its clients, by creating the strongest trade links between cryptocurrencies and hard currencies.

One smart **Bitfinex** feature, **Tether**, can actually link both types of currencies within the same Bitcoin **blockchain**.

Bitfinex provides the chance to deploy a wide range of transaction orders, including limits, markets, trailing stops, fill or kills, one cancels others (OCO's), hidden orders, and post-only limit orders.

Best of all, the exchange carries fairly high trading volumes, which means that accurate bid/ask spreads are narrow and order counts are resolved in real time, letting users to choose the best time to place an order.

You should know that Bitfinex was hacked in May 2015 and again in August 2016. However, the firm garnered high marks by fully compensating traders for the lost value in those hacks and has significantly upgraded security since then.

Now then, I want to be clear on a couple of things. First, I still firmly believe that the road to wealth is paved by tech.

But the new field of cryptocurrencies holds so much potential that it's worth investing small amounts of money. In other words, look on crypto trading as a high-risk/high-reward venture – only invest money you can afford to lose.

That's what I told folks who got a copy of my special report *The Roadmap to Marijuana Millions*. Some of them are sitting on gains of 2,802%. To find out how to get that report, just [click here](#).

By applying that example to your crypto trading, you'll limit your overall risk as you enter a field where you can literally score a 10-bagger – in a year or less.

I'll be showing you how to do so – here and in my premium services.

Check back to see what we're talking about.

This Event Is About to Rock the Cryptocurrency Market

As you know, Bitcoin has taken a big dive this year from its peak at almost \$20,000 to hovering around \$7,000 a coin for some time now.

But here's what most people don't know:

A massive system upgrade to Bitcoin is expected to go live at any time...

And cryptocurrency experts believe that when it does, the price of Bitcoin will soar – potentially to \$100,000 a coin, or more!

Why?

Because until now, the one BIG problem with Bitcoin has been that it's virtually useless as an actual form of money.

In its current form, payment transactions are ridiculously slow and the costs are extremely high.

But that will all change overnight when this new "Bitcoin fix" (<https://pro.moneymappress.com/m/387627/?iris=387627&d=https%3A%2F%2Fstrategictechinvestor.com>) is released.

This critical upgrade will finally make Bitcoin as easy to use as credit cards – and even cheaper than credit cards for businesses to accept.

When this becomes known, businesses all over the world will rush to accept Bitcoin.

And when the general public gets the option to buy everything from pizza to plane tickets with Bitcoin, look out – it'll create a buying frenzy the likes of which we've never seen.

The announcement of this upgrade could soon push Bitcoin way past the \$20,000 per coin price it reached last December... potentially as high as \$100,000 a coin.

And it's not just Bitcoin. This system upgrade could send other cryptocurrencies soaring as well.

Investors who make the right moves right now – before the announcement of this massive upgrade starts making headlines – will have the opportunity to make HUGE gains very quickly...

So it's critical that you view this important message (<https://pro.moneymappress.com/m/387627/?iris=387627&d=https%3A%2F%2Fstrategictechinvestor.com>) from a Bitcoin Investing Pioneer.

He will tell you exactly how you could take advantage of this coming upgrade. I have no doubt millionaires could be created from this event. Don't miss your shot at being one of them.

Congress Going All In on Bitcoin? \$100,000 Price Could Be Near

The United States Congress could have recently inadvertently sparked the biggest Bitcoin craze in history.

In a stunning and unexpected move, they issued H.R. 835, a Congressional Resolution that could instantly affect every one of the 14 million Bitcoin investors worldwide.

Bitcoin is already on a wild ride, soaring over 1,606% to \$17,000 per coin since January.

But thanks to this controversial move, H.R. 835 stands to send the price of Bitcoin to the moon.

Michael Robinson, a cryptocurrency expert and the author of **The Bitcoin Virtual Roadmap**, one of the most reputable books published on bitcoin investing, believes H.R. 835 is a game-changer.

Bitcoin trading for \$100,000 per coin within the next month is not out of the question, Robinson says.

"Thanks to the enormity of H.R. 835, I expect to see Bitcoin and other cryptocurrencies go mainstream. A single Bitcoin could easily reach \$100,000 – even before New Years."

Average Americans are becoming "Bitcoin millionaires" daily.

However, some folks have been staying on the sidelines, concerned about a potential bubble.

H.R. 835 could be the game-change they're looking for.

If it goes to \$100,000 per coin, a small stake of even \$500 could turn into \$2,940.

So if you want the chance to strike it rich with cryptocurrency, there's still time...

But you have to act now (<http://cryptocurrencyvirtualportal.com/cc2cwcf4.php?iris=828698&src=ob>).

Once this news gets out, the price of Bitcoin could skyrocket at any moment.

Just make sure you get access to The complete blueprint for profiting from today's (and tomorrow's) cryptocurrency boom (<http://cryptocurrencyvirtualportal.com/cc2cwcf4.php?iris=828698&src=ob>) before you make your move.

The Cryptocurrency Boom is a Once-in-a-lifetime Opportunity

Search through your coat pockets... behind the sofa cushions... the glove compartment of your car.

Because all it takes is some spare change to capitalize on the stock opportunity of a lifetime: cryptocurrencies.

If you make the right moves, you could find yourself jumping for joy on top of an enormous pile of cash.

Ready or not, a growing number of economies, banks, and billionaires are backing these new forms of tender.

And once you understand how easy it is to profit from cryptocurrencies, it's easy to see why...

The cryptocurrency market is preparing to take off.

And the only time to buy is now.

Just one tiny investment – even one under \$100 – could soon put you in a new class of “cryptocurrency millionaires.”

So sign up for your report below and see whether jumping on this moon-bound rocket is right for you.
